Project Title

Impact of COVID-19 on Students – Data Analysis Dashboard

Objective

To analyze how COVID-19 affected students':

- Study habits
- Mental health
- Screen time
- Lifestyle

Tools Used

- Excel / Power BI / Tableau (whichever you used)
- Data Cleaning
- Data Visualization

Dataset Description

- Student activity data during COVID
- Fields include:
    - Study time
    - Social media usage
    - Sleep hours
    - Stress activities
    - Region
    - Device usage

Key Insights

(Add the insights I gave above in bullet form)

Dashboard Features

- KPI cards (averages of activities)
- Bar charts (social media, stress busters)

- Pie chart (regional distribution)
- Filters (weight change, etc.)

Business / Real-World Impact

- Helps understand **student behavior during crisis**
- Useful for:
    - Schools
    - EdTech platforms
    - Mental health initiatives

Key Insights from Your Dashboard

1. Social Media Usage Increased Significantly

- Average time spent: **2.37 hours/day**
- **Instagram (1025)** is the most used platform, followed by YouTube and WhatsApp
- Platforms like Quora, Telegram have very low usage

Insight:
Students shifted heavily toward **entertainment and social interaction online**, which may impact productivity.

---

2. Online Class Experience is Mostly Poor

- Majority students rated experience:
    - **Very Poor (413)**
    - **Average (387)**
- Very few rated it as excellent

Insight:
Online learning was **not effective for most students**, possibly due to:

- Lack of interaction
- Technical issues
- Low engagement

---

3. Study Time vs Distraction

- Average time:
    - **Online class: 3.21 hrs**

- **Self-study: 2.91 hrs**
- **Social media: 2.37 hrs**

Insight:
Students are spending **almost equal time on social media and studying**, which may reduce academic performance.

---

4. Sleep is Relatively High

- Average sleep: **7.87 hours**

Insight:
Despite disruptions, students maintained **healthy sleep patterns**, possibly due to flexible schedules.

---

5. Stress Relief Activities

Top stress busters:

- Listening to music (highest)
- Online gaming
- Watching web series

Insight:
Students relied on **digital entertainment** for stress relief rather than physical or outdoor activities.

---

6. Fitness Activity is Low

- Average fitness time: **0.74 hours**

Insight:
Physical activity dropped significantly → potential **health impact during COVID**

---

7. Regional Study Pattern

- Outside Delhi NCR: **61.4% higher study time**
- Delhi NCR: **38.6%**

Insight:
Students outside metro areas may have:

- Fewer distractions
- More focus on studies

---

8. Device Usage for Online Classes

- Majority use: **Laptop/Desktop**
- Smartphones also used but less effective

Insight:
Better devices = better learning experience

---

9. Weight Changes

- Categories: Increased / Decreased / Constant

Insight (you can mention):

- Lifestyle changes led to **weight fluctuations**
- Likely linked to low fitness + high screen time
